Extension pipe

[Call for Pricing](#)

SFA Saniflo introduced this accessory in order to ease the installation as this new addition made it simpler to hide the pump behind any finished wall.

The 18" extension pipe was designed with the idea to reduce time when installing our macerators*. It has an inner gasket which connects to the rear spigot of the toilet without any difficulty. Its sealed connection keeps water from seeping out once the toilet is flushed. Its ease of installation is the reason why installers recommend this accessory for any Saniflo installation.

* Suitable for use with Sanitop, Saniplus and Sanibest.

The extension pipe

Installing the macerator unit behind a wall is made easy by using a proprietary extension pipe. This Extension Pipe is used with Saniplus and Sanibest products. The extension pipe is 18 inches in length and one side is pushed onto the spigot of the toilet and the other side, slips inside the macerator connection. When using the extension pipe, the toilet bowl should be raised 3/8 inch for additional gravity flow toward the macerator box.
